Panel 1 — Marketing Channel Performance Overview

Omni-Channel - Multi-Industry | Last 30 full days Mar 13, 2026 - Apr 11, 2026

Customer Tier: No filter | Product Category: No filter | Segment: Marketing Channel does not exist: Exclude

Panel 1 — Marketing Channel Performance Overview

Table: Marketing Channel Contribution & Performance Summary
Rows:
- Marketing Channel
- Marketing Channel Tier (Owned, Paid, Earned, Offline)

Metrics:
- Total Orders (Last Touch | Person | 30 Days)
- % of Total Orders
- Total Revenue (Last Touch | Person | 30 Days)
- % of Total Revenue
- Average Order Value (AOV)
- Revenue Efficiency Index (Revenue % ÷ Orders %)

Purpose
Evaluate marketing channel contribution to total orders and revenue using a consistent attribution model
Measure the effectiveness of each channel in driving conversion volume and business value
Compare performance across channels and channel tiers to identify differences in scale and efficiency
Identify whether performance is driven by **volume (reach) or efficiency (conversion value)**
Establish a baseline for marketing channel optimization and investment strategy

Panel 1 — Marketing Channel Performance Overview Insights

Key Insights
- Owned channels drive the majority of conversions, contributing over half of total orders, but slightly under-index on revenue, indicating strong conversion performance with modestly lower order values.
- Paid channels provide balanced contribution across both orders and revenue, with efficiency closely aligned to volume, making them a reliable and scalable acquisition driver
- Earned and organic channels deliver consistent, stable performance with near-neutral efficiency, serving as a dependable baseline source of traffic and conversions
- Offline channels contribute a smaller share of total performance but show pockets of higher value, particularly in channels like Direct Mail, suggesting potential under-attribution in last-touch models
- Average Order Value is relatively consistent across most channels, indicating that overall performance differences are driven more by channel volume than by large differences in conversion efficiency

Implication
Marketing performance is primarily driven by **channel reach and volume**, with relatively consistent efficiency across most channels.
Scaling high-performing channels—particularly within Owned and Paid groups—will yield the greatest incremental impact, while targeted optimization efforts should focus on improving value within high volume channels and better understanding the contribution of offline and assist-driven channels.

Total Orders

268,678

Total Orders (Last Touch | Person | 30 Days) : Marketing Channel

Total Revenue

Panel 2 — Marketing Lifecycle — Acquisition vs Closure

Omni-Channel - Multi-Industry | This month Apr 1, 2026 - Apr 30, 2026

Customer Tier: No filter | Product Category: No filter | Segment: Marketing Channel does not exist: Exclude

Panel 2 — Marketing Lifecycle (Acquisition vs Closure)

Table: Marketing Lifecycle Performance
Rows:
- Marketing Channel
- Marketing Channel Tier (Owned, Paid, Earned, Offline)

Metrics:
- Acquisition Rate
- Closure Rate
- Lifecycle Index (Acquisition Rate - Closure Rate)

Purpose
- Evaluate the **role each marketing channel plays across the customer journey**, from initial engagement to final conversion
- Measure whether channels are more effective at **driving acquisition (early-stage influence)** or **closing conversions (late-stage impact)**
- Compare channel performance to identify **imbalances between acquisition and closure behavior**
- Identify channels that may be **over- or under-valued in last-touch attribution models**
- Establish a framework for **full-funnel marketing optimization and channel role alignment**

Panel 2 — Marketing Lifecycle (Acquisition vs Closure) Insights

Key Insights
- **Direct Mail and Push are strong acquisition drivers**Direct Mail shows the highest acquisition bias (+90%), with Push also contributing strongly to early-stage engagement
  - These channels play a key role in **initiating customer journeys rather than closing them**
- **SMS and Paid channels are relatively balanced across the funnel**SMS shows a slight acquisition bias (+14%), while Paid Search and Display are nearly neutral
  - Indicates these channels are effective at both **driving traffic and supporting conversion**
- **Email is a strong closing channel**Negative lifecycle index (-1.0%) indicates Email is more effective at **final conversion than acquisition**
  - Reinforces its role as a **primary remarketing and conversion driver**
- **In-App Messaging is the strongest closer in the ecosystem**
  - Lifecycle Index of -9.3% shows a significant bias toward closure
  - Indicates this channel is highly effective at **converting already engaged users**, but not at driving initial engagement
- **Most channels cluster near neutral, indicating shared responsibility across the funnel**Many channels (Paid Search, Comparison Shopping, Organic, Display) show Lifecycle Index values near zero
  - Suggests a **multi-touch ecosystem where channels contribute across multiple stages of the journey**

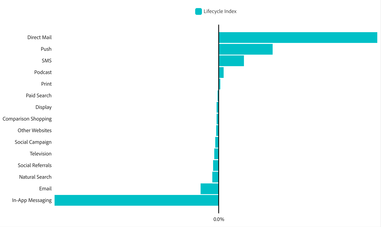
Implication
Marketing channels play **distinct but complementary roles across the customer journey**, and last-touch attribution alone does not fully capture their value.
- **Acquisition-focused channels** (e.g., Direct Mail, Push) should be evaluated on their ability to drive new engagement
- **Closure-focused channels** (e.g., Email, In-App Messaging) should be optimized for conversion efficiency
- **Balanced channels** provide flexibility and support across the funnel

Marketing Lifecycle Performance

Marketing Channel (Page 1/ 1 Rows: 50 1-15 of 15)	Acquisition Rate (Apr 1 – Apr 30)	Closure Rate (Apr 1 – Apr 30)	Lifecycle Index (Apr 1 – Apr 30)
	100% (1 out of 100%)	100% (1 out of 100%)	0.0% (1 out of 0.0%)
1. Direct Mail	12%	3%	9.0%
2. Push	16%	12%	3.1%
3. SMS	16%	14%	1.4%
4. Podcast	5%	5%	0.3%
5. Print	4%	4%	0.1%
6. Paid Search	10%	10%	-0.1%
7. Display	7%	8%	-0.1%
8. Comparison Shopping	12%	12%	-0.1%
9. Other Websites	11%	12%	-0.1%
10. Social Campaign	7%	7%	-0.2%
11. Television	5%	5%	-0.3%
12. Social Referrals	4%	4%	-0.3%
13. Natural Search	5%	5%	-0.4%
14. Email	21%	22%	-1.0%
15. In-App Messaging	7%	17%	-9.3%

Lifecycle Index

(+) = Better at Acquisition
(-) = Better at Closing



Panel 3 — Marketing Flow (Channel Interaction Analysis)

Omni-Channel - Multi-Industry | This month Apr 1, 2026 - Apr 30, 2026

Customer Tier: No filter | Product Category: No filter | Segment: Marketing Channel does not exist: Exclude

Panel 3 — Marketing Flow (Channel Interaction Analysis)

Visualization: Marketing Channel Flow
Configuration:
- **Pathing Dimension:** Marketing Channel (30 Day Person)
- **Metric:** Total Orders
- **Container:** Person
- **Flow Direction:** Both (Previous → Next)
- **Repeats:** Off

Purpose
Visualize how customers move between marketing channels prior to conversion
Identify the most common **multi-touch paths leading to orders**
Understand how **acquisition and closure channels interact across the journey**
Reveal which channels act as **entry points, assist channels, or final touchpoints**
- Provide context for how **channel roles (from Panel 2) translate into real customer behavior**

Panel 3 — Marketing Flow (Channel Interaction Analysis) Insights

Key Insights
Email and SMS act as dominant closing nodes in multi-channel paths
- Many journeys converge into Email and SMS before conversion
- Reinforces their role as **primary closing channels** identified in Panel 2

Push and Direct Mail frequently appear as early-stage entry points
- These channels often initiate journeys that transition into other digital channels
- Supports their role as **acquisition drivers** rather than closers

Paid and Earned channels serve as key connectors across the journey
- Channels like Paid Search, Comparison Shopping, and Other Websites appear throughout paths
- These channels help **bridge discovery and conversion stages**

Customer journeys are predominantly multi-touch, not single-channel
- A significant portion of orders involve multiple channel interactions
- Highlights the limitation of relying solely on **last-touch attribution**

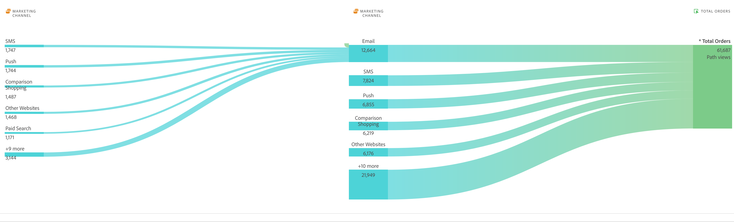
High-volume paths follow predictable patterns (Acquisition → Consideration → Closure)
- Common Flows
  - Push → Paid Search → Email
  - Direct Mail → Other Websites → SMS
  - Social → Comparison Shopping → Email

Indicates a structured **funnel-like progression across channels**

Implication
Customer behavior reflects a **connected, multi-channel ecosystem**, where channels work together rather than independently.
- **Acquisition channels** initiate engagement
- **Mid-funnel channels** support evaluation and consideration
- **Closure channels** finalize conversion

Marketing Flow

Ends with: Total Orders | Pathing dimension: Marketing Channel (30 Day Pers) | Flow container: People | Repeats: Off | First/last occurrence limiting: Off



Panel 4 — Marketing Performance by Conversion Channel

Omni-Channel - Multi-Industry | This month Apr 1, 2026 - Apr 30, 2026

Customer Tier: No filter | Product Category: No filter | Segment: Marketing Channel does not exist: Exclude

Panel 4 — Marketing Performance by Conversion Channel

Table: Conversion Channel Performance by Marketing Channel
Rows:
- Marketing Channel

Columns:
- Conversion Channel
  - Mobile App
  - Website
  - Mobile Web
  - Point of Sale (POS)
  - Call Center

Metrics:
- Total Orders (Last Touch | Person | 30 Days)
- % of Total Orders (within each conversion channel)

Purpose
- Evaluate how marketing channels drive conversions across **different platforms and touchpoints**
- Understand how channel effectiveness varies by **conversion environment (App, Web, POS, Call Center)**
- Identify which channels are most effective at driving **digital vs offline conversions**
- Compare channel performance to uncover **cross-channel behavioral differences**
- Provide insight into how marketing supports a **true omni-channel customer journey**

Panel 4 — Marketing Performance by Conversion Channel Insights

Key Insights
In-App Messaging dominates Mobile App conversions
- In-App Messaging is the leading driver of App-based orders
- Reinforces its role as a **highly effective closer within the app ecosystem**

Email is the strongest cross-channel performer
- Email consistently drives high order volume across Website, Mobile Web, POS, and Call Center
- Demonstrates versatility as both a **digital and cross-channel conversion driver**

SMS and Push perform strongly across digital touchpoints
- Both channels contribute meaningfully across App, Web, and Mobile Web
- Indicates effectiveness in **real-time engagement and conversion support**

Paid and comparison channels show consistent performance across platforms
- Paid Search, Comparison Shopping, and Other Websites contribute across all conversion channels
- Highlights their role as **mid-funnel connectors that translate across environments**

Offline channels (POS, Call Center) show strong alignment with traditional and direct channels
- Channels like Direct Mail and Television contribute more meaningfully to offline conversions
- Suggests a **natural alignment between offline marketing and offline purchase behavior**

Implication
Marketing effectiveness varies significantly by **conversion environment**, reinforcing the importance of an omni-channel strategy.
- **Digital-native channels** (In-App Messaging, Push) are most effective within app and mobile environments
- **Cross-channel drivers** (Email, SMS) bridge digital and offline conversions
- **Traditional channels** align more closely with offline conversion points

Conversion Channel Performance by Marketing Channel

Marketing Channel (Page 1/ 1 Rows: 50 1-15 of 15)	Online Orders: Website	Online Orders: Mobile App	Online Orders: Mobile Web	Offline Orders: Point Of Sale	Offline Orders: Call Center
